

Wall Mounted Enclosure (Lockable 24-way)

- **Secure & robust design**
- **Cost effective quality manufacture**
- **Independent Splice & Patch sections**
- **Most industry standard connections**
- **Dual hinged access doors**
- **Compact for unobtrusive installation**
- **Cable entry / exit - top & bottom**

Data sheet Issue: 2

The Wall Mounted Enclosure is manufactured from mild steel and will provide secure termination and distribution for up to 24 fibres. Ideally suited to applications where space is at a premium and a rack is unavailable, this unit has the added security of a hinged lockable door.

The unit has two compartments, the left side is designed for incoming plant cable and splice management, the smaller right hand side compartment is for patchcord distribution and is lockable. A laser warning sign alerts users to the fact that hazardous laser radiation may be present on the panel or contained therein.

Standard arrangement for cable entry & exit consists of the left-hand side having 4 x cable access holes (2 top & 2 base), whilst the right-hand compartment has 2 x slots (1 top & 1 bottom) for patchcord routing.

All industry standard connectors are catered for via various types of removable bulkhead panels.

This unit can be provided bare or with fibre management kits & pigtails, or even supplied with pre-terminated tails for speed & ease of installation.
